

## ENGINEERING LICENSURE

**Adopted by the IEEE-USA  
Board of Directors, 3 August 2015**

IEEE-USA believes that engineering licensure contributes to the profession's efforts to protect the health, welfare and safety of the public, by ensuring that practitioners meet minimum recognized levels of competence, as demonstrated by successful completion of education, experience, and examination requirements. Further, professional licensing and the associated self-regulation serves the interest, of the IEEE and the public, by giving engineers an efficient and effective means to obtain a widely recognized credential. In support of this position, IEEE-USA:

- Represent the interests of IEEE members in the licensure process
- Aggressively participates sound engineering licensure procedure, on a continuing basis
- Strives to promote the adoption of uniform engineering licensure requirements among all states and territories; to the benefit of those engineers whose practice spans jurisdictions
- Helps to develop content and specifications for national examinations that are used to evaluate computer, electrical and electronics, power and software engineering competence
- Provides educational materials related to professional licensure to IEEE section meetings, conferences, individuals and IEEE members
- Encourages individuals to pursue engineering licensure, not only as a means of meeting the legal requirements for protecting the health, welfare and safety of the public, but also to ensure that they are prepared to meet the needs of international, national and state engineering practice

This statement was developed by the IEEE-USA Licensure and Registration Committee, and represents the considered judgment of a group of U.S. IEEE members with expertise in the subject field. IEEE-USA advances the public good and promotes the careers and public policy interests of the more than 200,000 engineering, computing and allied professionals who are U.S. members of the IEEE. The positions taken by IEEE-USA do not necessarily reflect the views of IEEE, or its other organizational units.
